1. Unnecessary comments (AddItemActivity 13-16 and many other places) — comments without any useful information

2. Dimensions is a data class — It can be replaced with just height, width, and length in Item class

3. In SectionsPagerAdapter.getPageTitle the switch statement can be replaced by another structure type. This code smell is a problem because it creates the complexity of the requester class to know what each int value means (0 for "All", 1 for "Available" and 2 for "Borrowed").
